A request for an increase or decrease in NMD by a customer will be made to CoE and CoE will, after consideration, agree or not agree to increase or decrease the NMD.

Note: Eskom, if in agreement, may still continue charging the higher NMD for a period of 12 months and this will be passed on to the customer.

Exemptions for exceeding the NAC due to unforeseen demand overshoots (including faults) caused by a failure in normal operations and/or technical functioning of a customer's load, may be requested from the HOD: Energy, and may qualify for a period of less than the minimum of 3 months.

Note: A reduction in NAC to a value that is below the rolling previous 12 months highest recorded demand in all time periods may be allowed by any of the following: change in operations, closure of plant, installation by the customer of load management equipment, the implementation of demand side management initiatives or where demand exemptions have been granted by the Head of Department: Energy.

7. INDUSTRIAL EFFLUENT

7.1. Issuing of an Industrial Effluent Discharge Permit (Section 34 of the Waste Water By-laws of the Council) **No charge**

7.2. In respect of industrial effluent, the highest of the tariffs calculated in terms of item 7.3.2 or specified in items 7.3.3 or 7.3.4 shall be payable.

7.3. Industrial Effluent Treatment and conveyance charge.

7.3.1. Calculation of Industrial Effluent Treatment and Conveyance Charge

The following provisions apply with regard to and for purposes of calculating, the treatment and conveyance charge provided for in paragraph 7.3.2.

(a) In addition to any other charges provided for in these tariffs or in any other law, a charge calculated in accordance with the provisions of these tariffs shall be payable to the Council in respect of each month during which industrial effluent is discharged from any premises.

(b) Each user of the Council's sewerage disposal system (hereinafter referred to as "the said user") discharging industrial effluent into such system may be required to test such

industrial effluent, in accordance with any provisions stipulated in their permit to discharge industrial effluent, and report the results to the Council.

(c) The Council shall, in its entire discretion, conduct analysis on composite or grab samples of the industrial effluent, taken at random. The values obtained by the Council shall be taken as correct and used to calculate the treatment and conveyance charge. Whenever the Council takes a sample, one half thereof shall be made available to the said user, if required at the time when the sample is taken. The said user may use half of the sample to verify the results obtained by the Council, but should take note that only accredited Laboratory results are comparable.

(d) The average of the values of the different analysis results of 24 hourly composite or grab samples of the industrial effluent, taken during the relevant month, as referred to in subparagraph (c) above, will be used to determine the treatment charge payable.

In cases where only one set of analysis were performed on a user's industrial effluent during a specific month and some or all of the values obtained from the said analysis, as intended in this paragraph, is considered incorrect or if the said user successfully proves the incorrectness of any values obtained from said analysis, those values will be substituted by averages of the values taken over the previous three consecutive months.

In cases where multiple sets of analysis were performed on a said user's industrial effluent during a specific month, only the specific set of analysis, containing the incorrect values, may be deleted without substitution with averages, provided that it be considered that if all the sets of analysis during a specific month are incorrect, all sets of analysis for the specific month be deleted and substituted by a set of averages of the values taken over the previous three consecutive months.

In the event of a said user having own analysis conducted on the industrial effluent and in the event that the said user requests that these analysis results also be included in the determination of the treatment charge payable, it will only be included in the calculations subject to the following provisions:

(i) Analysis must be conducted by an accredited laboratory.

(ii) All the analysis results conducted during the relevant month must be submitted to Council, timeously at the end of each month.

(iii) The averages of the values thus provided by the said user will be used as a single set of results to be included with all the Council's own sets of analysis results for the specific month, in calculating the treatment charge.

The Council reserves the right to refuse the inclusion of such analysis results as referred to in sub-subparagraph (d) iii should any interference in the samples or validity of the results be suspected.

(e) In the total absence of a sample, the said user shall pay to the Council the higher of the amounts as determined per items 7.3.3 or 7.3.4 hereof per month plus such other applicable tariffs prescribed herein.

(f) In the absence of any direct measurement, by industrial effluent meter, the quantity of industrial effluent discharged during a period shall be determined by the Council taking into consideration the quantity of water consumed on the premises during that period, the quantity of the water consumed on the premises for domestic purposes, the quantity lost to the atmosphere during the process of manufacture and the quantity present in the final product produced on the premises. Thus calculated, the quantity of industrial effluent discharged will be reflected as a constant percentage of the water consumed on the premises. The Council may request that such calculation be done and certified by an independent professional engineer at the cost of the set user.

(g) If a Council water meter, metering the quantity of water consumed on the premises, is proven to be defective, the appropriate adjustments shall be made to the quantity of industrial effluent discharged when calculated as prescribed in subparagraph (f) by using the average consumption over the three month period prior to the meter becoming defective until the defective meter has been repaired or replaced

(h) For the purpose of calculation of the quantity of industrial effluent discharged from each point of discharge of industrial effluent as aforesaid, the total quantity of water consumed on the premises shall be allocated among the several points of discharge as accurately as is reasonably practical after consultation between the Council and the said users of the relevant premises.

The Council shall, in its entire discretion, decide if a composite sample shall be taken proportional to the industrial effluent discharged from each point of discharge, as calculated in this subparagraph or if each discharge point should be sampled individually.

(i) In the event of direct measurement the owner or occupier of a premises where an industrial effluent meter is installed, shall ensure that the said meter is correctly installed and calibrated every second year, provided that the Council reserves the right to require calibration at any time, at its absolute discretion.

(j) In the event of the unavailability of a representative industrial effluent meter reading, due to malfunction or through circumstances preventing the reading being taken, the quantity of industrial effluent discharged for a period shall be determined by using the average of the direct measurements over the three month period prior to the meter becoming defective.

In the event of a defective industrial effluent meter, or circumstances preventing the reading being taken, the meter shall be repaired or replaced within three months or Council, at its own discretion, will resort back to calculation of the quantity of industrial effluent as prescribed in subparagraph (f)

(k) For the purpose of calculating the Industrial tariff, in instances where the average concentration of the CODi, Pi, Ni, and SSi parameters of any industry is lower than the relevant five year average concentrations of the councils sewerage system for a period of 6 consecutive months, the council can at its own discretion use the tariff as indicated in section 7.3.1 (e) and cancel the application of item 7.2 and all sampling and testing of those particular companies.

This arrangement will be re-evaluated and confirmed yearly. If at any period the composition of the effluent and the concentration have changed or any suspicion that it might have changed, normal testing of each applicable parameter will be done and item 7.2 will be instituted for calculating the Industrial effluent tariff.

7.3.2. Treatment and Conveyance Charge (SEEFFL)

In addition to any other fee or charges payable in terms of this schedule of tariffs, there shall be payable to the Council, in respect of any premises on which any trade or industry is carried out and from which, as a result of such trade or industry or of any process incidental thereto, any effluent (hereinafter referred to as "industrial effluent") is discharged into the Council's sewage disposal system, a treatment and conveyance charge, being an amount calculated on the industrial effluent discharged, the strengths and the permitted (allowed) concentrations of the industrial effluent discharged during the relevant month and in accordance with the following formula:
