The standard deviation of the mean population distribution is the standard error of the mean. The standard error of the mean can be calculated by dividing the standard deviation of the sample by the square root of the number of observations in the sample.

Collaborative studies have been undertaken on geiger-muller instruments, Geiger-Muller Detectors, Proportional Detectors and Scintillation Detectors used by the Surveyor-General's Office, Geological Survey of India and the Indian Space Research Organization. Studies have also been undertaken on the use of Geiger-muller detectors for the detection of radon emanation and radon concentration in indoor air. Studies have also been undertaken on the use of Geiger-muller detectors for the detection of radon emanation and radon concentration in indoor air.

The precise location of the modern population was unknown and the young doctor determined which station could be approached. Voles in those areas were exposed to regular and very little trapping.
