## Executive Summary

### Purpose and objectives:

The declaring of bioregions and the gazetting of bioregional plans forms part of the legislated tools identified by the National Environmental Management: Biodiversity Act (Act No. 10 of 2004), hereafter referred to as the Biodiversity Act, to aid in the conservation and management of South Africa's biodiversity.

The purpose of a bioregional plan is to facilitate the safeguarding of biodiversity within identified biodiversity priority areas that fall outside of the Protected Area (PA) Network, as well as, to provide a map of biodiversity priorities with accompanying land use planning and decision-making guidelines to inform land-use planning, environmental assessment and authorisations, and natural resource management.

### Intended users and uses:

The bioregional plan has both mandatory and recommended users. Mandatory users are obligated to take the bioregional plan into consideration, while recommended users could find the bioregional plan to be a useful planning and development tool.

### Underlying biodiversity plan:

The Vhembe District Bioregional Plan is based on the Critical Biodiversity Area (CBA) maps developed in the Limpopo Conservation Plan V2, 2013 the current systematic biodiversity plan for the province undertaken by the Limpopo Department of Economic Development, Environment and Tourism (LEDET).

### Physical context:

Vhembe District Municipality (VDM) is located in the Northern portion of Limpopo Province. It is bordered by Zimbabwe to the north and Botswana to the northwest. There are four Local Municipalities (LM's), namely:

- Makhado LM
- Thulamela LM
- Musina LM
- Collins Chabane LM (newly formed)

### Significance of biodiversity:

Vhembe District Municipality, inclusive of the Kruger National Park, has 24 different vegetation types. Two of the 24 vegetation types are classified as Threatened ecosystems, namely Tzaneen Sour Lowveld which is classified as Endangered and Lowveld Riverine forest classified as Vulnerable. It should also be noted that Mapungubwe Forest located on the northern border of the District near Mapungubwe National Park is classified as Endangered.

Thirteen (13) of the vegetation types occurring within the District are classified as endemic and five (5) as near endemic.

### Planning environment:

Many instruments and informants were addressed in terms of understanding the status quo of the planning environment relating to biodiversity conservation and planning within the District inclusive of Protected Areas planning (Protected Areas, National Protected Areas Expansion Strategy), Multi

sectoral planning (Spatial Development Frameworks, Integrated Development Plans) and Other Informants (Vhembe Biosphere Reserve, Important Bird Areas).

### Critical Biodiversity Areas:

One of the outputs of the LCPv2 is a map of Critical Biodiversity Areas (CBAs) and Ecological Support Areas (ESAs). These are classified into these different categories based on biodiversity characteristics, spatial configuration and requirement for meeting targets for both biodiversity pattern and ecological processes.

- Protected Areas are declared and formally protected under the National Environmental Management: Protected Areas Act, 2003 (Act No 57 of 2003), hereafter referred to as the Protected Areas Act. These include National Parks, Nature Reserves, World Heritage Sites and Protected Environments that are secured by appropriate legal mechanisms.
- Critical Biodiversity Areas are sites that are required to meet biodiversity targets for ecosystems and species, and need to be maintained in good ecological condition. The majority of the CBAs in the Vhembe District Municipality are CBA 1, which can be considered irreplaceable in that there is little choice in terms of areas available to meet targets. Those areas falling within CBA 2 are considered optimal. Although they represent areas where there are other spatial options for achieving targets, the selected sites are the ones that best achieve targets of the systematic biodiversity plan.
- Ecological Support Areas (ESAs) are areas that are important for supporting the ecological functioning of CBAs and protected areas and for meeting biodiversity targets for ecological processes. This category has also been split into ESA1 and ESA2 on the basis of land cover. ESA1s are in a largely natural state, while ESA2s are no longer intact but potentially retain significant importance from an ecological process perspective (e.g. agricultural land maintaining landscape connectivity).
- Other Natural Areas (ONAs) are areas that still contain natural habitat but that are not required to meet biodiversity targets.
- No Natural Areas Remaining are areas without intact habitat remaining.

### Vhembe District Bioregional Plan:

The proposed bioregional plan for the Vhembe District Municipality was based on the Limpopo Conservation Plan v2 (Desmet et al., 2013) and adapted to take into account stakeholder comments, threats and agreed resolutions.

In response to potential losses and threats identified during the alignment process undertaken during the development of the Vhembe District Bioregional Plan, the CBAs and ESAs of the LCPv2 required updating in order to ensure that biodiversity targets remained intact within the District. Guidelines for decision-making:

These guidelines provide a framework for land-uses compatible with the land management objectives of each category on the Map of CBAs. The guidelines are designed to aid planners to identify the appropriate zones and controls to impose on areas designated as Critical Biodiversity Areas or Ecological Support Areas.

Importantly, the Vhembe District Bioregional Plan provides guidance on appropriate land uses and does not grant or remove existing land-use rights or take the place of development application authorisation processes.

The guidelines should be used in conjunction with other sector-specific guidelines applicable within the Province, such as Mining and Biodiversity Guideline (SANBI, 2013), Atlas of Freshwater Ecosystem Priority Areas for South Africa (Nel et al., 2011), Limpopo Protected Area Expansion

Strategy Technical Report (Desmet et al, 2014), Implementation Manual for Freshwater Ecosystem Priority Areas (Driver et al., 2011) and Vhembe Biosphere Reserve Initial SEMP: Desired State of the Environment Report with Environmental Management Guidelines (SEF, 2016).

### Additional measures:

In addition to the guidelines for decision-making, the bioregional plan recommends additional measures to support biodiversity management, conservation and planning within the Vhembe District Municipality. These include the Data collation and management, Capacity building, Effective biodiversity management, Building a biodiversity economy and Awareness raising. Monitoring and review:

The primary purpose of on-going monitoring is to evaluate the on-going implementation of the bioregional plan. In this respect, implementation indicators are proposed which do not require investment into baseline biodiversity data gathering, but rather focus on the evaluation of the implementation mechanism. This should allow indicators to be evaluated on at least an annual basis.

However, it will be necessary to evaluate the biodiversity outcome of the implementation of the bioregional plan in order to conduct the required five-year review of the bioregional plan. Additional biodiversity indicators have been proposed in this regard.

The bioregional plan must be reviewed and updated (where necessary) at least every five years. Should the review process indicate that it is necessary to update the bioregional plan or components of the bioregional plan, then this should be undertaken and the revised bioregional plan should be re-submitted to the Member of the Executive Committee (MEC) for approval. Ideally, this should be timed to precede the revision cycle for municipal SDFs.

Although the VDM is the lead implementing agency for the Vhembe District Bioregional Plan, LEDET is the agency responsible for the update of the Vhembe District Bioregional Plan as required.
