Notice: 41/2023

CITY OF MATLOSANA LOCAL MUNICIPALITY**BY-LAWS RELATING TO THE BUILDING CONTROL MATTERS IN THE MUNICIPAL AREA**

To provide a regulatory framework for the construction of buildings in formal areas and traditional settlement/ farm areas within the City of Matlosana Local Municipality municipal jurisdiction, to promote uniformity with formal areas and traditional settlement/ farm areas in terms of building structures that are sustainable, structurally sound and comply with the energy efficiency requirements, to bridge a gap between the stringent National Building Regulations and Standards Act, 1977 (Act No. 103 of 1977), to establish a building standard and regulate the installation of structures, to provide guidelines for property owners regarding problem buildings within the City of Matlosana Local Municipality and the regulation thereof, to regulate structures that are referred to as minor building works in the National Building Regulation and Building Standards Act, 1977 (Act No. 103 of 1977); to enforce the building standard related thereto and provide for offences and penalties.

PREAMBLE

WHEREAS Section 24 of the Constitution of the Republic of South Africa (Act No. 108 of 1996) states that everyone has the right to an environment that is not harmful to their health or well-being; and to have that environment protected, for the benefit of present and future generations;

WHEREAS Section 32 of the Constitution states that everyone has the right to any information held by the state; and any information that is held by another person and that is required for the exercise or protection of any rights;

WHEREAS Section 156(1) of the Constitution confers on municipalities the right to administer local government matters listed in Part B of the schedule 4 and 5;

WHEREAS Section 156(2) and (5) of the Constitution provides that a municipality may establish and administer Bylaws for the effective administration of the matters which it has a right to administer and exercise any power concerning a matter reasonably necessary for, incidental to, the effective performance of its functions;

WHEREAS Section 11(3)(m) of the Municipal Systems Act, 2000 (Act No. 32 of 2000) grants municipalities the right to adopt Bylaws;

WHEREAS Section 4 of the National Building Regulations and Standards Act, 1977 (Act No. 103 of 1977) empowers the Council to provide approval for applications in respect of erection of buildings;

WHEREAS Section 7 of the National Building Regulations and Standards Act, 1977 (Act No. 103 of 1977) empowers the Council to control the design and the construction of the buildings;

WHEREAS the Construction Regulations of 2014 under Section 43 of the Occupational Health and Safety Act, 1993 (Act No. 85 of 1993) describe the requirements and obligations that must be complied with when embarking on construction work to ensure that all construction work is performed in a safe manner.

35.1. Construction methods before installation of conservancy tanks/ septic tanks

- a) Excavations shall be deepened locally, where necessary, to remove soft spots;
- b) Hard spots, wherever practicable, shall be removed;
- c) Excessive excavations shall be avoided and be shored by timber/steel to prevent collapse of adjacent soils;
- d) Excavations shall be kept free of surface water
- e) Where the bottom of the excavation has dried out excessively due to exposure or it has softened due to rain or ground water, the excavation shall be re-bottomed(levelled) before concreting;

- f) Backfill soil(sand) shall be maintained before compaction, so that a small quantity squeezed in the hand is firm, but does not show signs of moisture;
- g) Fill(soil/sand/G5) shall be placed in un-compacted layers that do not exceed 100 mm in respect of hand compaction, and 150 mm in respect of compaction by mechanical means; and each un-compacted layer shall be well compacted at before additional fill (soil/sand/G5) material is added.

35.2. Guideline and specifications to construct and install septic tanks

- a) A masonry/concrete conservancy tank/septic tanks to be used on a site for the reception of sewage shall have a minimum concrete strength of 20mpa (Mix ratio 2 bags cement, 2 wheelbarrows sand, 2 wheelbarrows stone) and all internal sides be plastered to a smooth finish.
- b) The use of Crusher sand mix is prohibited in concrete construction for septic tanks
 - i. Prefabricated septic tanks shall have a stamp indicating SABS approved and testing by means of regulation 0400 which shall clearly visible.
- c) Masonry/concrete/prefabricated conservancy tanks/septic tanks shall be designed and constructed in such a way;
 - i. that it will be impervious (leak free) to liquid;
 - ii. that there will be a ready means of access for the clearing of such tank;
 - iii. be so designed and sited that it is not likely to become a source of nuisance or a danger to health; or
 - iv. the structural integrity of adjacent buildings;
- d) A conservancy tank or septic tank may not be installed less than 2, 0 m from the property boundary, or another structure. (Refer to 29.7 figure 1 below for guideline drawing)
- e) Generally, tanks should be located near driveways to facilitate cleaning by a vacuum tanker located at the front or closest access to property, to allow for easy cleaning and disposal by waste removal service providers and there should be a ready means of access for the clearing of such tank
- f) Be vented at the building of toilet, the vents should extend above the eaves level of the building.
- g) No industrial effluent shall be allowed to flow into a septic tank.
(Refer to 29.7 figures 2 & 3 below for guideline drawing)

35.3. Requirements to prevent leaks and contamination.

- a) Septic tanks should be tested for water tightness.
- b) It should be filled with water before use and tested over a period of 24 hours for water tightness.
- c) No chemical additives are needed to assist the digestion process in a septic tank and normal amounts of domestic bleach, caustic materials, soaps, detergents and drain cleaners do not impede the process.
- d) Only bio degradable cleaning liquids should be used in cleaning of toilets
- e) Materials such as sanitary towels, facial tissue, coffee grounds, cooking oil and cigarette butts should not be flushed into the tank because they do not biodegrade and will clog the system.

35.4. French drains

French Drains which is to receive effluent shall:

- 1) Be so constructed and located as not to cause the pollution of any spring, stream, well or other source of water which is used or is likely to be used, for drinking, domestic use or kitchen purposes;
- 2) Be so positioned that the foundations of adjacent buildings are not adversely affected by its discharge;
- 3) Be not less than 3 m from any building or boundary of the site on which it is situated;
- 4) French drains should, where possible, be located downhill of a water source such as a borehole or spring. Where location downhill of such water source is not possible, French drains should be located at least 50 m from the water source/river and streams;
- 5) Pipes discharging into French drains shall be open-jointed or perforated.

- 6) The impermeable covering is required to prevent ingress of rain or surface water.
 - 7) An inspection pipe shall be installed in all French drains
 - 8) French drains shall not be deeper than 1,8 m. Surfaces shall be protected by means of 30 mm to 100 mm thick layer of fine gravel or coarse sand.
 - 9) A topsoil layer of between 100 mm and 150 mm shall be placed on top of the drain over an impermeable covering. (Refer to 29.7 Figure 4)
- (Refer to 29.7, Figure 5 for cross section detail on French drains)

35.5. Prohibited Installation

No conservancy tank/septic tanks may be constructed where:

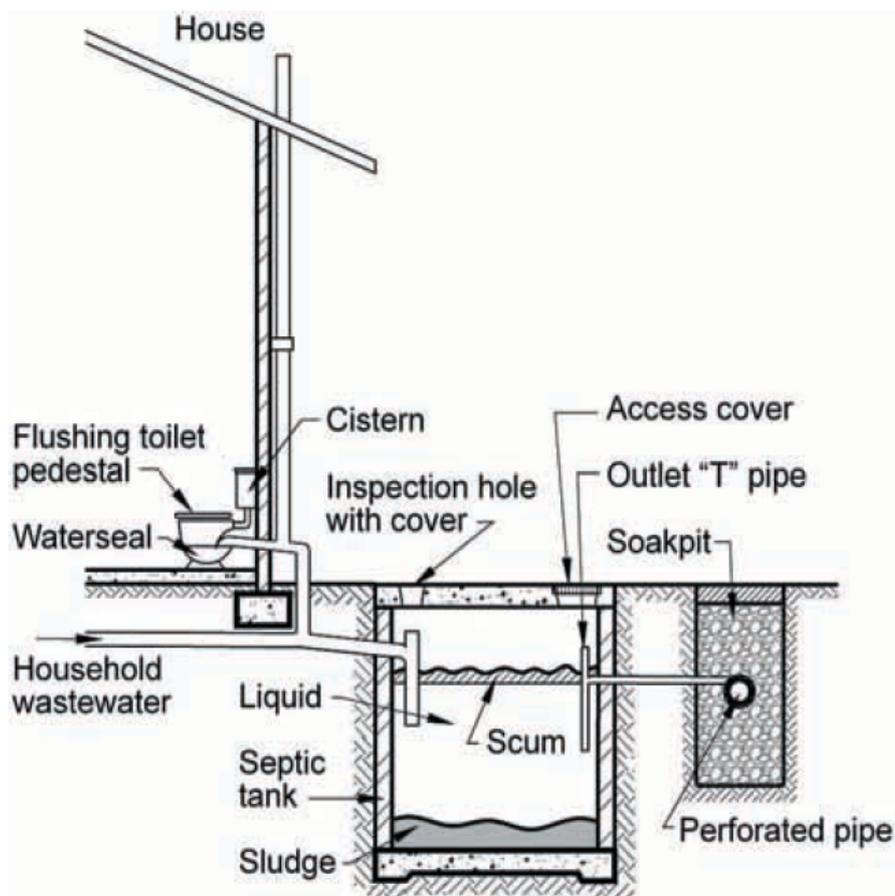

- i. the ground that has a percolation rate (absorption of water in soils) that exceeds 30 min;
- ii. effluent might flow out due to the contours or the strata forming of the ground;
- iii. the site to be affected by such effluent is of insufficient size to accommodate the soaking away of the effluent; and have a minimum depth of 1.5 meters; or
- iv. the level of the water table is, or might be, such as to prevent adequate percolation;
- v. It is closer than 3m of Municipal water service line for clean water drinking purposes;
- vi. It is closer than 3m of Municipal Storm water network drains and pipes.

35.6. Drawing guide of conservancy/septic tanks

Figure 1: Concrete Septic tank with soak-pit.

2m distance from house to Conservancy tank Soak-away 1.5m away from conservancy tank

Refer to section 29.3 (4) & section 29.6 (v) & (vi) for permissible positioning & minimum depth of 1.5 meters

The function of the septic tank is to condition raw sewage, which has a clogging effect on soil, thereby reducing the effective absorption capacity of the subsoil. When the raw sewage enters the tank some of the suspended solids settle to the bottom of the tank and some collect at the surface, with the result that three distinct layers are formed in the tank: a layer of sludge at the bottom, a floating layer of scum on the top and a relatively clear liquid layer in between. The organic solids and dissolved material in the sewage are attacked by bacteria so that the volume of scum and sludge is reduced by liquefaction and gasification. The only function of the final disposal system is to get rid of the effluent (raw sewage) from the septic tank in a safe and inoffensive way.
