**STANDARDS ACT, 1993
STANDARDS MATTERS**

In terms of the Standards Act, 1993 (Act No. 29 of 1993), the Council of the South African Bureau of Standards has acted in regard to standards in the manner set out in the Schedules to this notice.

All South African standards that were previously published by the South African Bureau of Standards with the prefix "SABS" have been redesignated as South African national standards and are now published by Standards South Africa (a division of SABS) with the prefix "SANS".

A list of all existing South African national standards was published by Government Notice No. 1373 of 8 November 2002.

In the list of SANS standards below, the equivalent SABS numbers, where applicable, are given below the new SANS numbers for the sake of convenience. Standards that were published with the "SABS" prefix are listed as such.

SCHEDULE 1: ISSUE OF NEW STANDARDS

The standards mentioned have been issued in terms of section 16(3) of the Act.

Standard No. and year	Title, scope and purport
SANS 207:2006	<i>The design and construction of reinforced soils and fills.</i> Gives recommendations for the application of reinforcement techniques to soils and other fills. Also gives design guidelines for the reinforcement of soils.
SANS 348:2006	<i>Safety surgical scalpels, sterile packed for single-use.</i> Specifies the requirements for a sterile, single-use, safety surgical scalpel with a retractable blade. It does not cover detachable surgical blades.
SANS 499:2006/ ISO 487:1998	<i>Steel roller chains, types S and C, attachments and sprockets.</i> Specifies the characteristics of a range of steel roller chains, dimensionally derived from the malleable iron type and suitable for the conditions of operation and maintenance prevailing in such fields as agriculture, building, quarrying and related industry, mechanical handling, etc., and of associated chain sprockets.
SANS 606:2006/ ISO 606:2004	<i>Short-pitch transmission precision roller and bush chains, attachments and associated chain sprockets.</i> Specifies the characteristics of short-pitch precision roller and bush chains with associated sprockets suitable for mechanical transmission of power and allied applications. It covers dimensions, tolerances, length measurement, preloading, minimum tensile strengths and minimum dynamic strength.
SANS 1275:2006/ ISO 1275:1995	<i>Double-pitch precision roller chains and sprockets for transmission and conveyors.</i> Specifies requirements for double-pitch precision roller chains suitable for the mechanical transmission of power and for conveyors, together with those for their associated sprockets. Covers dimensions, tolerances, length measurement, proof testing and minimum tensile strengths. The chains are intended for use under less onerous conditions with respect to speed and power transmitted than are the base chains from which they are derived.
SANS 1977:2006/ ISO 1977:2000	<i>Conveyor chains, attachments and sprockets.</i> Specifies the characteristics of bush, plain and flanged roller chains of both solid and hollow bearing pin types designed for general conveying and mechanical handling duties, together with associated chain sprockets and attachments. The chain dimensions specified in this standard will ensure interchangeability of complete chains and individual links for repair purposes.
SANS 3512:2006/ ISO 3512:1992	<i>Heavy-duty cranked-link transmission chains.</i> Specifies dimensions (in mm), tolerances, measuring forces and minimum tensile strengths, together with the tooth gap forms and rim profiles of the associated chain wheels.
SANS 4347:2006/ ISO 4347:2004	<i>Leaf-chains, clevises and sheaves – Dimensions, measuring forces and tensile strengths.</i> Specifies the characteristics of chains used for general lifting purposes, together with the rim profiles of sheaves and the chain attachment ends of clevises. It gives dimensions, limits for interchangeability, length measurement, preloading and minimum tensile strengths.
SANS 8528-8:2006/ ISO 8528-8:1995	<i>Reciprocating internal combustion engine driven alternating current generating sets – Part 8: Requirements and tests for low-power generating sets.</i> Specifies requirements, minimum performances and type tests for low-power generating sets driven by reciprocating internal combustion engines for land and marine use (domestic, recreational and industrial application), excluding generating sets used on aircraft.
SANS 8528-9:2006/ ISO 8528-9:1995	<i>Reciprocating internal combustion engine driven alternating current generating sets – Part 9: Measurement and evaluation of mechanical vibrations.</i> Describes a procedure for measuring and evaluating the external mechanical vibration behaviour of generating sets at the measuring points stated in this part of SANS 8528.
SANS 8528-10:2006/ ISO 8528-10:1998	<i>Reciprocating internal combustion engine driven alternating current generating sets – Part 10: Measurement of airborne noise by the enveloping surface method.</i> Specifies measurement methods for the determination of airborne noise emitted by reciprocating internal combustion engine driven generating sets in such a way that the total of relevant noise emissions, for example, exhaust and cooling system noise, together with all other sources of engine noise, are evaluated on a similar basis to yield comparable results.

Agrément Certificate No 2006/324

Name of product: Protea Umbono Building System

Certificate holder: Protea FSG

Description: Protea Umbono Building System buildings are single-storey buildings, designed, manufactured, assembled and erected on site under the control of a professional engineer who will:

- ensure the structural integrity of the entire building
- adhere to the details within this certificate

The Protea Umbono Building System consists of a modular load-bearing wall and roof framework of 90 mm x 38 mm cold formed lipped steel channel sections manufactured from 0,55 mm thick galvanized sheet steel.

Wall frames are erected on concrete surface beds with thickened edge beams. Frames comprise galvanised steel lipped channel base rails, studs and noggings, bracing and top rails. Once erected, wall frames are clad externally in 12 mm medium density Nutek Board and internally in 15 mm Firestop Rhinowall gypsum plaster board. External walls are insulated with 40 mm of Isotherm thermal insulation.

Roof rafters, in pairs, are supported by eaves walls and an apex lattice beam which spans between the top of gable walls. Roofs are clad in conventional steel or fibre cement roof sheeting.

Gypsum plasterboard ceilings are installed in all buildings and are attached to timber bracing which in turn is attached to the underside of the roof structure. Where specified, ceilings are insulated with 75 mm of Isotherm thermal insulation.

For all dwellings erected in the Southern Coastal Condensation Problem Area, ceilings are installed. Elsewhere, ceilings and 75 mm of Isotherm thermal insulation may be specified.

All other aspects of the system are conventional and utilise conventional products and materials.
