NORTH WEST NOORDWES

APPLICATION FOR A NUCLEAR INSTALLATION LICENCE FOR A PRODUCTION SMELTER AT THE SOUTH AFRICAN NUCLEAR ENERGY CORPORATION (NECSA), PELINDABA

In terms of the National Nuclear Regulator Act (No. 47 of 1999), an application for a **Nuclear Installation License** has been submitted by NECSA to the board of the National Nuclear Regulator. The application is submitted for the construction, commissioning, operation and decommissioning of a production smelter on the Pelindaba terrain of NECSA.

1. Full name of applicant:

South African Nuclear Energy Corporation (NECSA).

2. Physical address of the proposed installation:

Area 26, Pelindaba East Site, Pelindaba, North West Province.

3. Postal address of applicant: PO Box 582, Pretoria, 0001

4. Description of nuclear installation:

The Nuclear Liabilities Management division of the Pelindaba Nuclear Institute decided to install an induction smelter on the Pelindaba site. The smelter, which will be used for decontaminating scrap material by melting, is regarded as essential in the process of reducing NECSA's nuclear liabilities. The main reasons for this statement are as follows:

- Originating from NECSA's previous operations, approximately 14 000 tons of uranium contaminated scrap metal is stored on the Pelindaba site. The larger portion of this metal consist of about 36 000 separation elements which, as a result of non-proliferation, needs to be destroyed completely. Melting is the most appropriate, cost effective method to obtain this.
- The remainder of the uranium contaminated scrap metal mentioned above cannot be decontaminated by conventional chemical means. Due to its form and volume, it is also not economical to store such equipment indefinitely or dispose thereof in the appropriate manner. Melting would result in a significant reduction in the volume of the contaminated metals.
- Through a melting process it is possible to separate the radioactive materials from the metals to such an extent that in most cases the melted metals could be cleared as uncontaminated materials with the radioactivity concentrated in the slag. The contaminated slag from the melting operation, which comprises only about 5–10% of the volume of material melted, would then be stored as radioactive waste.
- The scrap metal is made up of steel, cast iron, stainless steel, aluminium and other non-ferrous alloys (mainly copper based). The majority of this scrap comprises either one or the other of the above materials, but about 40% are assemblies with a combination of metals, which cannot be separated economically. It is not the intention to separate the different alloys of the assemblies. These are to be melted solely to decontaminate and to reduce the volume of the scrap.

All releases of materials will be handled strictly in accordance with the requirements of the National Nuclear Regulator, based on international standards.

The installation will comprise a 125 kg Test Smelter and two 4 000 kg Production Smelters.

In terms of section 21 (4) (a) of the National Nuclear Regulator Act (Act No. 47 of 1999) any person who may be directly affected by the granting of a nuclear installation licence pursuant to this application, may make representation to the NNR board, relating to health, safety and environmental issues connected with the application. Such representation must be made within 30 days of the publication of the licence application in the *Government Gazette* (intended date of publication 16 March 2001) to the following address: The Chief Executive Officer, National Nuclear Regulator, PO Box 7106, Centurion, 0046. Facsimiles: (012) 663-5513.
