The 25 containers selected for sampling shall be grouped into 5 lots of 5 each. Container No. 1 of the first lot shall then be opened and the contents thrown into the hopper of a sample splitter with the gate closed. The gate shall then be opened and the speed of feed regulated to avoid spilling from the splitting device.

Splitting devices capable of drawing 1/16th of the original weight of the material, are preferable. The sample so obtained shall then be transferred to a clean container. Containers Nos. 2, 3, 4 and 5 shall be similarly treated, and all samples transferred to the same container. A quantity of approximately 32 lb. should so be obtained in case of 100 lb. containers. This joint sample shall then be thoroughly mixed and again thrown into the hopper of the sample splitter, with the gate closed. The gate shall be opened and a sample of approximately 2 lb. collected. This procedure shall be repeated twice more. The three samples shall be well mixed, ground where facilities exist and passed through a small sample splitter capable of dividing the sample into three portions. Each sample so obtained shall be transferred to an airdry container, sealed and marked. In all three samples shall be obtained from each lot of fine containers.

The second, third, fourth and fifth lots shall be similarly treated.

If fewer than 25 containers are to be sampled, each and every container shall be taken.

It shall be the duty of the inspector or officer to clean the splitter thoroughly before a fertilizer is sampled. Or

(ii) *By hand*.—The inspector or other officer shall take 25 (twenty-five) closed containers, irrespective of the number of the run, lot or consignment. The 25 containers selected for sampling shall be grouped into 5 lots of 5 each. Container No. 1 of the first lot shall then be opened and the contents shall be placed on a clean, smooth sheet, thoroughly mixed and spread out. (d) Die chemiese ontleding of waarborg van elke misstof soos op die aansoekvorm vir registrasie van sodanige misstof gemeld, moet in elke advertensie van sodanige misstof gemeld word.

(e) Die naam van die misstof wat in 'n advertensie verskyn, moet dié wees wat op die betrokke registrasiesertifikaat vermeld staan.

NEEM VAN MONSTERS.

19. (1) Ooreenkomsdig artikel *vyftien* van die Wet kan 'n inspekteur of 'n ander beampte spesiaal deur die Sekretaris daartoe gemagtig, op enige plek in die Republiek monsters van misstowwe uit toegemaakte houers haal.

(2) Waar 'n houer 5 lb. of meer stof bevat, word monsters op een van die volgende maniere geneem:—

(i) *Meganies*.—Die inspekteur of ander beampte moet 25 (vyf-en-twintig) toegemaakte houers neem, afgesien van die totale getal daarvan in die reeks, lot of besending. Die 25 houers wat vir die neem van monsters gekies word, word in 5 groepe van 5 elk gegroepeer. Houer No. 1 van die eerste groep word oopgemaak en die inhoud daarvan gegooi in die bak van 'n verdeler met die sluis toe. Die sluis word dan oopgemaak en die voerspoed gereël om te voorkom dat daar uit die verdelingstoestel gémors word.

Verdelers wat 'n monster van 1/16de van die oorspronklike gewig van die stof kan trek, word verkieks. Die monster aldus opgevang word dan na 'n skoon houer oorgeplaas. Houers No. 2, 3, 4 en 5 word insgelyks behandel en alle monsters na dieselfde houer oorgeplaas. In die geval van 100 lb.-houers behoort 'n hoeveelheid van ongeveer 32 lb. opgevang te word. Hierdie gesamentlike monster word dan deeglik gemeng en weer in die bak van die monsterverdeler, met die sluis toe, gegooi. Die sluis word dan oopgemaak en 'n monster van ongeveer 2 lb. opgevang. Hierdie prosedure word nog twee maal herhaal. Die drie monsters word deeglik gemeng, gemaal waar fasilitete beskikbaar is, en deur 'n klein monsterverdeler, wat die monster in drie dele kan verdeel, gegooi. Elke monster aldus verkry, word in 'n lugdroë houer geplaas, verseel en gemerk. Altesaam moet drie monsters van elke groep van vyf houers verkry word.

Die tweede, derde, vierde en vyfde groepe word net so behandel.

Indien van minder as 25 houers monsters geneem moet word, moet uit elke afsonderlike houer geneem word.

Dit is die plig van die inspekteur of beampte om die verdeler deeglik skoon te maak voordat van 'n misstof monsters geneem word. Of

(ii) *Met die hand*.—Die inspekteur of ander beampte moet 25 (vyf-en-twintig) toegemaakte houers neem afgesien van die totale getal daarvan in die reeks lot of besending.

Die 25 houers wat vir die neem van die monster gekies word, word in 5 groepe van 5 elk gegroepeer. Houer No. 1 van die eerste groep word oopgemaak en die inhoud daarvan op 'n skoon, gladde seiltjie uitgegooi, deeglik gemeng en oopgesprei. Met 'n skeping word ongeveer 6 lb van die misstof van verskeie plekke op die hooi geneem. Hierdie monster word in 'n skoon houer geplaas. Houers No. 2, 3, 4 en 5 word net so behandel en die monsters word in dieselfde houe

in the same container. A quantity of about 30 lb. should be so obtained from five 100 lb. containers. This joint sample shall be thoroughly mixed and be spread out on a clean, smooth sheet. By means of a scooping utensil take approximately 6 lb. of fertilizer from various locations of the heap. After thoroughly mixing the joint sample shall be passed through a small sample splitter capable of dividing the sample into three portions. Each sample so obtained shall be transferred to an airdry container, sealed and marked. Lots 2, 3, 4 and 5 shall be similarly treated.

If fewer than 25 containers are to be sampled, each and every container shall be sampled.

In the case of 5 lb. containers to be sampled the contents of all five containers of lot 1 shall be emptied onto the smooth sheet to obtain 25 lb. of material for further subdivision, mechanically or by hand.

(3) Where a container contains less than 5 lb. of material, sampling shall be performed by the following method:—

An inspector may take any container or containers in which the fertilizer is kept and spread the contents thereof on a clean smooth sheet. Such contents shall thereafter be mixed, after which the inspector may take samples for examination and analysis therefrom.

(4) Where the fertilizer is unpacked, sampling shall be performed by the following method:—

The inspector or other officer shall take from 5 different locations on the heap each a 2 lb. container full of the fertilizer and throw them on a clean smooth sheet. This joint sample shall be thoroughly mixed and spread out. By means of a scooping utensil take approximately 5 lb. of the fertilizer from various locations on the sheet. After thorough mixing the latter sample shall be passed through a small sample splitter capable of dividing the sample into three portions. Each sample so obtained shall be transferred to an airdry container, sealed and marked.

This procedure shall be repeated 4 times on 20 different spots on the heap, so that a total of 5 samples in triplicate are obtained.

(5) The sample shall then be dealt with as prescribed by sub-section (2) of section fifteen of the Act.

(6) The certificate accompanying one part of the sample to the analyst as required by sub-section (2) of section fifteen of the Act, shall be in the forms prescribed in the Fourth Schedule hereto.

ASSESSING QUALITY.

20. (1) *Packings of 5 lb. and over each.*—For the purpose of assessing the quality of a lot comprising packings of 5 lb. and over, the average of the analysis obtained for the five samples shall be deemed to be the average for the 25 containers originally taken. If fewer than 25 containers were samples, one sample of each and every container shall be analysed and the average of the analyses obtained shall be deemed to be the average for all containers.

Acceptable quality for straight fertilizers (superphosphate, double superphosphate, raw-super mixture, basic slag, treated phosphate, limestone ammonium nitrate, ammonium sulphate, ammonium nitrate, urea, potassium chloride, Potassium sulphate, potash-magnesia, etc.) shall be such that the average of the five samples shall be equal to or greater than 96 per cent of the guaranteed analysis.

In the case of mixtures and compound fertilizers, with two or more plant food components, as well as all fertilizers of group 2 acceptable quality shall be such that the average of the five samples analysed shall be equal or greater than 93 per cent of the guaranteed analysis of each and every component.

geplaas. 'n Hoeveelheid van ongeveer 30 lb. word aldus verkry uit vyf 100 lb.-houers. Hierdie gesamentlike monster word deeglik gemeng en op 'n skoon, gladde seiltjie uitgesprei. Met 'n skepding word ongeveer 6 lb. van die misstof van verskeie plekke op die hoop geneem. Na deeglike menging word die gesamentlike monster deur 'n klein monsterverdeler, wat die monster in drie dele kan verdeel, gegooi. Elke monster aldus verkry, word in 'n lugdroë houer geplaas, verseël en gemerkt.

Die 2de, 3de, 4de en 5de groepe word net so behandel.

Indien van minder as 25 houers monsters geneem moet word, word uit elke afsonderlike houer geneem.

Waar van 5 lb.-houers monsters geneem word, word die inhoud van al vyf houers van Groep No. 1 uitgegooi op die gladde seiltjie en ongeveer 25 lb. materiaal vir verdere onderverdeling—meganies of met die hand—te verkry.

(3) Waar 'n houer minder as 5 lb. materiaal bevat, word monsters op die volgende wyse geneem:—

'n Inspekteur kan enige houer of houers waarin die misstof gehou word, neem en die inhoud daarvan op 'n skoon, gladde seiltjie oopsprei. Sodanige inhoud word dan gemeng, waarna die inspekteur monsters vir ondersoek en ontleding daaruit mag neem.

(4) Waar die misstof onverpak is word monsters as volg geneem:—

Die inspekteur of ander beampete moet op 5 verskillende plekke van die hoop elk 'n 2 lb. houer vol van die misstof skep en op 'n skoon gladde seiltjie gooie. Hierdie gesamentlike monster moet deeglik gemeng en oopgesprei word. Met 'n skepding moet ongeveer 5 lb. van die misstof van verskeie plekke op die seiltjie geneem word. Na deeglike menging word laasgenoemde monster deur 'n klein monsterverdeler, wat die monster in drie dele kan verdeel, gegooi. Elke monster aldus verkry, word in 'n lugdroë houer geplaas, verseël en gemerkt.

Hierdie prosedure moet 4 keer herhaal word op 20 verskillende plekke op die hoop, sodat 'n totaal van 5 monsters in triplikaat verkry word.

(5) Die monster word dan behandel soos voorgeskryf by subartikel (2) van artikel vyftien van die Wet.

(6) Die sertifikaat soos vereis by subartikel (2) van artikel vyftien van die Wet, wat een deel van die monster na die ontleder vergesel, moet in die vorm wees wat in die Vierde Bylae hiervan voorgeskryf word.

BEOORDELING VAN KWALITEIT.

20. (1) *Verpakkings van 5 lb. en meer elk.*—Vir die doel om die kwaliteit van 'n lot te beoordeel, bestaande uit verpakkings van 5 lb. en meer, word die gemiddelde ontleding van die vyf monsters geag die gemiddelde van die 25 houers oorspronklik geneem, te wees. Indien van minder as 25 houers monsters geneem word, moet een monster uit elke afsonderlike houer ontleed word en die gemiddelde van die ontledings aldus verkry word geag die gemiddelde vir al die houers te wees.

'n Aanneemlike kwaliteit van enkelvoudige misstowwe (superfosfaat, dubbelsuperfosfaat, rufosfaat, superrumengsel, slakmeel, behandelde fosfaat, kalksteen-ammoniumnitraat, ammoniumsulfaat, ammoniumnitraat, ureum, kaliumchloried, kaliumsulfaat, potasmagnesia, ens.) moet sodanig wees dat die gemiddelde ontleding van die vyf monsters gelyk aan of groter is as 96 persent van die gewaarborgde ontleding.

In die geval van mengse's en saamgestelde misstowwe met twee of meer plantvoedselbestanddele sowel as alle groep 2-misstowwe moet die aanneemlike kwaliteit sodanig wees dat die gemiddelde van die vyf monsters ontleed gelyk aan of groter is as 93 persent van die gewaarborgde ontleding van elke afsonderlike bestanddeel.

(2) Packings of less than 5 lb. each.—Where packings of less than 5 lb. are analysed, acceptable quality shall be such that the analysis of a single sample is equal to or greater than 90 per cent of the guaranteed analysis in respect of each and every component in such a fertilizer.

(3) Unpacked.—For the purpose of assessing the quality of a heap (unpacked), the average of the analysis obtained for the five samples shall be deemed to be the average of the heap.

Acceptable quality shall be such that the average of the five samples shall be equal to or greater than 93 per cent of the guaranteed analysis of each and every component.

OFFENCES AND PENALTIES.

21. Any person who contravenes, or fails to comply with any provision or requirement of these regulations shall be guilty of an offence and liable on conviction to a fine not exceeding two hundred rand or imprisonment for a period not exceeding six months, or to both such fine and such imprisonment.

22. The regulations promulgated by Government Notice No. 2099, dated the 21st October, 1955, as amended, are repealed as from the 1st January, 1964, when these regulations shall come into force.
