Vol. 364

PRETORIA, 13 OCTOBER
OKTOBER 1995

No. 16764

GENERAL NOTICE

NOTICE 1097 OF 1995

INDEPENDENT BROADCASTING AUTHORITY

NOTICE OF PUBLICATION OF DRAFT FREQUENCY PLAN

In accordance with section 31 of the Independent Broadcasting Authority Act, Act 153 of 1993, the Independent Broadcasting Authority ("the Authority") hereby publishes its draft Frequency Plan with respect to the Medium Wave (AM) (sound radio), VHF FM (sound radio) and VHF and UHF television broadcasting bands as set out in the Schedule.

Interested parties are invited to—

- (a) obtain from the Authority a copy of a position paper on the Frequency Plan in which the development of the proposed Frequency Plan is described and motivated;
- (b) submit written comments and representations, duly motivated and complying with internationally accepted methods applicable to ITU Region 1 (which includes Africa) for preparing a frequency plan, by post or fax or delivered by hand to—

THE INDEPENDENT BROADCASTING AUTHORITY

Khasho House
26 Baker Street
Rosebank
Johannesburg;

Attention: Ms Barbara Paxinos

OR

Private Bag X31

Parklands

2121;

OR

Fax: (011) 447-6187/8/9;

so as to be received by the Authority not later than six weeks from the date of publication of this notice; and

- (c) in the same manner and at the same time indicate whether they require an opportunity to make oral representations at the anticipated public hearings regarding the Frequency Plan which will be held in Johannesburg, Cape Town and Durban at dates to be announced.

DRAFT FREQUENCY PLAN

**BROADCASTING
FREQUENCY ASSIGNMENTS IN THE REPUBLIC
OF SOUTH AFRICA**

APPENDICES

Appendix A: Frequency assignments for VHF/FM sound broadcasting

Appendix B: Frequency assignments for MF/AM sound broadcasting

Appendix C: Frequency assignments for HF/AM sound broadcasting

Appendix D: Frequency assignments for television broadcasting

Appendix E: Frequency assignments for VHF/FM self-help sound broadcasting

Appendix F: Frequency assignments for self-help television broadcasting

Appendix G: Frequency assignments for the broadcasting-satellite service

1. INTRODUCTION

This report gives the current broadcasting frequency assignments in South Africa, in the form of tables. The tables are produced from the IBA's electronic data base.

The frequencies listed fall into one of three groups of assignment status. These are: frequency assigned and in use (operational); spare frequency in the vicinity of an existing transmitting station site and frequency available for use in the vicinity of a theoretically determined lattice node point.

The information is given in tables which, in the case of VHF and UHF stations, is structured to give the transmitting station name, together with its coordinates. This is then followed by the frequency, the maximum effective radiated power and the polarisation mode. In the case of MF (medium-frequency) and HF (high-frequency) stations a somewhat different format is followed. In cases where the frequency is already in use the name of the programme service is given, together with the date that it came on the air. In each case it is indicated into which of the three above-mentioned assignment-status categories the frequency falls.

The information is presented in three main categories, namely "terrestrial assignments" (section 2), "terrestrial self-help station assignments" (section 3) and "broadcasting-satellite service assignments" (section 4). The first two categories correspond to the ITU-defined broadcasting service (BS), while the latter category corresponds to the ITU-defined broadcasting-satellite service (BSS). For each of the terrestrial categories the information is divided into sub-categories relating to the sound and television broadcasting services. The sound-broadcasting service, in the case of terrestrial assignments, is further subdivided into categories relating to frequency band and modulation method. These are VHF/FM, MF/AM and HF/AM. This subdivision does not apply to the sound-broadcasting service in the case of terrestrial self-help station assignments, as only VHF/FM applies. In the case of the television broadcasting category there is no subdivision.

Separate tables are provided either per category or sub-category, depending on whether the category or sub-category is at the lowest hierarchical level in the structure of subdivision. The tables are given in appendices, as listed at the end of the table of contents, for easy referencing.

The information is given alphabetically according to the name of the transmitting station, except in the case of HF/AM, where only one station (Meyerton) is concerned. In the majority of cases the station name relates to a well-known nearby town or geographic feature.

2. TERRESTRIAL ASSIGNMENTS

This section covers all terrestrial broadcasting assignments, for both sound and television, but excluding assignments for self-help stations (see definitions of self-help stations in section 3).

2.1 SOUND-BROADCASTING SERVICE

This subsection covers the frequency assignments for the sound-broadcasting service as defined by the ITU, for the categories used in the RSA, viz. VHF/FM, MF/AM and HF/AM. The description of the categories, their frequency tables and relevant definitions, are given in the subsections to follow.

2.1.1 VHF/FM

Description of category

Frequency and associated information contained in this category are given in Appendix A and relate to the frequency plan as defined in ITU [1984].

The category includes all VHF/FM sound transmitting stations. VHF/FM stations are those which make use of frequency modulation and which operate in the band 87.5 to 108.0 MHz.

The ITU plan provides for nominally six frequencies per transmitting site. At certain transmitting sites, seven or more frequencies have been assigned. This has been made possible by assigning so-called additional channels or by assigning more than one lattice node point to a station. There are 204 frequencies available for use in the RSA.

Definitions of terms used in table

Station name: The internationally coordinated name of the transmitting station. The name was decided upon using the following guidelines: In cases where the site is located in or near a city, major town or suburb, the name of such city, town or suburb is used. In cases where it is not located near a city or town the name of a relevant hill, mountain or other well-known geographical feature is used. In some cases, where a station name is used, the station does not yet exist, neither is there a developed site. The station name in those cases is a provisional name that is associated with a theoretical lattice node point. Whether the name is provisional can be established from the entries in the "status" column. The entries for all frequencies will be THEO (theoretical lattice node point) (See definition of "Status").

Latitude and longitude: The nominal coordinates of the station in degrees and minutes south and east as contained in the ITU frequency plan. In those cases where a site has not yet been developed, i.e. where the frequency is assigned to a theoretical lattice point, the coordinates are those of the theoretical point.

Freq. (MHz): The frequency in megahertz.

ERP: The maximum effective radiated power. In the case of an omni-directional antenna it is the effective radiated power in any direction. In the case of a directional antenna it is the effective radiated power in the direction of maximum gain. The ERP is specified in either watts (W) or kilowatts (kW).

Polarisation: The dominant polarisation mode of the transmitting antenna, which in the majority of cases is the only mode. The dominant polarisation is either horizontal (H) or vertical (V).

Service: The programme service carried by the transmission. The codes for the programme services are as follows:

2000	Radio 2000	(SABC)
AFST	Afrikaans Stereo	(SABC)
ALGO	Radio Algoa	(SABC)
BOP	Radio Bop	
CAP	Capital Radio	
CIS	Radio Ciskei	
HVLD	Highveld Stereo	(SABC)
JAKR	Radio Jakaranda	(SABC)
MBA	Radio Mmabatho	
METR	Radio Metro	(SABC)
NDEB	Radio Ndebele	(SABC)
ORAN	Radio Oranje	(SABC)
RAD5	Radio 5 (Five FM)	(SABC)
RGHP	Radio Good Hope	(SABC)
RKON	Radio Kontrei (KFM)	(SABC)
RPNA	Radio Port Natal	(SABC)
RTHO	Radio Thohoyandou	
SAFM	SAFM	(SABC)
SESO	Radio Sesotho	(SABC)
SUN	Radio Sunshine	
SWAZ	Radio Swazi	(SABC)
TRAN	Radio Transkei	
TSON	Radio Tsonga	(SABC)
TWSA	Radio Setswana	(SABC)

VEND	Radio Venda	(SABC)
XHOS	Radio Xhosa	(SABC)
ZULU	Radio Zulu	(SABC)
RABS	Adullam Broadcasting Service	
RAFK	Radio Afrikana	
RALX	A.L.X FM	
RATL	Radio Atlantis	
RABC	Azaania Broadcasting Corporation	
RBBT	Radio BBT	
RBSH	Bush Radio	
RBUW	Buwa Radio	
RCFL	Radio C-Flat	
RCBF	Campus Bay	
RCCR	Cani Community Radio	
RMED	Channel Med	
RZCR	Radiocomm	
RDYR	Durban Youth Radio	
REWR	East Wave Radio	
RPRT	Radio Ermelo	
RFMR	Fine Music Radio	
RFHK	Radio Fish Hoek	
RGNC	Good News Community Radio	
RGRF	Graaf-Reinet	
RGPR	Grandprix Radio	
RHLD	Radio Helderberg	
RHIZ	Radio Horizon	
RIMP	Impact Radio	
RKRS	Kangala Community Radio Services	
RKFH	Radio Kingfisher	
RKOP	Radio Koppies	
RPRT	Radio Kransberg	
RKWZ	Radio Kwezi	
RPRT	Radio Lichtenburg	
RMAG	Magaliesburg	
RMFM	Radio Matie	
RMBC	Muslim Broadcasting Corp	
RPRT	Radio Pretoria	
RNQL	Radio Namaqualand	
RPHV	New Panhellenic Voice	
RPHX	Radio Phoenix	
RPRT	Radio Platorand	
RCPT	Radio Portugal	
R786	Radio 786	
RDMR	Rhodes Music Radio	
RPPL	Radio Ripple	
RSFR	Radio Safari	
RSDV	Sedaven	
RSFM	Shimla	
RSMR	Smart FM	

RSHG	Soshanguve Community Radio
RSCR	Soweto Community Radio
RPRT	Radio Tafelkop
RTNT	Technikon Northern Transvaal
RTEK	Teks FM Stereo
RTUK	Radio Tuks
RTRT	Tuin Roete
RTRF	Radio Turf
RTHY	Radio Tygerberg
RUOT	Unitra Community Radio
RUCT	UCT Radio
RVAL	Radio Vaal/VCR FM
RVSD	Radio Visarend
RVOS	Voice of Soweto
RVLK	Radio Volkstem
RVHD	Vryheid
RVCR	Vukani Community Radio
RWST	Radio West
RPRT	Radio Wolkberg
RPRT	Radio Ysterberg
RZBL	Radio Zibonele
RPRT	Radio Drakensberg
RPRT	Radio Dagbreek
RMZB	Radio Maritzburg
RISR	Iscorian Radio

On-air date : The date on which the service came on the air.

Where omitted the frequency is either available for future use at the station site or available for re-assignment to a site in the vicinity of the theoretical lattice point in the ITU plan (See definition of "Status"). In the case of some stations the on-air date is not available.

Status : In this column it is indicated whether the frequency has been assigned to a station that is already operational (OPER). Alternatively, it is indicated whether the frequency exists as either a spare frequency (SPAR), i.e. a frequency which may be used in the vicinity of an already developed site, or a frequency that may be used in the vicinity of a theoretical lattice node point (THEO). Where all frequencies for a particular station is indicated as THEO, the name of the station is provisional (See definition of "station name").

2.1.2 MF/AM**Description of category**

Frequencies and associated information contained in this category, given in Appendix B, relate to the frequency band from 535,5 to 1606,5 kHz. Although the Republic of South Africa is not a signatory to the plan of ITU [1975] the frequency regulatory authority has always abided by the technical provisions laid down in the plan.

The category includes all medium-frequency amplitude modulation (MF/AM) type stations that exist in the Republic of South Africa. Frequencies assigned to theoretical stations and which are available for future use are also included.

Definition of terms used in table

Station name: The standard name of the transmitting station. The name has been decided upon using the following guidelines: In cases where the site is located in or near a city or major town, the name of such city or town is used. In some cases, where a station name is used, the station does not yet exist, neither is there a developed site. The station name in those cases is a provisional name that is associated with the nearest city, town or suburb. Whether the name is provisional can be established from the entries in the "status" column. The entries for all frequencies will be THEO (theoretical). (See definition of "Status")

Latitude and longitude: The coordinates of the station in degrees and minutes south and east. In those cases where a site has not yet been developed, i.e. where the frequency is assigned to a theoretical lattice point, the coordinates are those of the theoretical point.

Freq. (kHz): The frequency in kilohertz.

EMRP: The effective monopole radiated power. This is the power supplied to the antenna, multiplied by its gain referred to that of a short vertical antenna in the horizontal plane.

Service: The programme service carried by the transmissions. The codes for the programme services are as follows:

CAP	Capital Radio
METR	Radio Metro (SABC)
NDEB	Radio Ndebele (SABC)
R702	Radio 702
RBOP	Radio Bop
RMMB	Radio Mmabatho
RPLP	Radio Pulpit
SWAZ	Radio Swazi (SABC)
THOH	Radio Thohoyandou
XHOS	Radio Xhosa (SABC)

Status: In this column it is indicated whether the frequency has been assigned to a station that is already operational (OPER). Alternatively, it is indicated whether the frequency exists as either a spare frequency (SPAR), i.e. a frequency which may be used in the vicinity of an already developed site, or a frequency that may be used in the vicinity of a theoretical lattice node point (THEO). Where all frequencies for a particular station is indicated as THEO, the name of the station is provisional (See definition of "station name").

2.1.3 HF/AM

Description of category

Frequencies and associated information contained in this category, given in Appendix C, relate to the service described in the Radio Regulations of the ITU (See ITU [1990]).

The category includes all amplitude-modulated (AM) transmissions at high frequency (HF), often called shortwave (SW). The HF band allocated to broadcasting is divided into a number of sub-bands for frequencies between 3000 kHz and 30000 kHz.

The sub-bands are :

3200 to 3400 kHz
3950 to 4000 kHz
4750 to 4995 kHz
5005 to 5060 kHz
5950 to 6200 kHz
7100 to 7300 kHz
9500 to 9775 kHz
11700 to 11975 kHz
15100 to 15450 kHz
17700 to 17900 kHz
21450 to 21750 kHz
25670 to 26100 kHz

All transmissions in this category are currently done from the Meyerton HF station that belongs to Sentech. The station is about 60km to the south of Johannesburg at 26° 35' south and 28° 08' east.

Excepting the tropical bands, which range from 3000 to 5000 kHz, all transmissions are done to target areas beyond the borders of the RSA. Transmissions in the tropical bands are used to provide coverage inside a country. The maximum transmitter output power is restricted to 50 kW.

Frequency assignment notifications are made to the ITU four times a year, in line with the ITU requirements. The ITU has identified four broadcasting seasons, viz.

March and April (M Season)
May to August (J Season)
September and October (S Season)
November to February (D Season)

Although the frequency notifications are made four times a year, actual frequency changes usually take place only twice a year.

The assignment of frequencies in the HF band is influenced by the utilisation of the available spectrum over the whole of the globe, as well as by propagation conditions. Propagation conditions vary over a 24 hour period, from season to season and from year to year. The year-to-year variation occurs according to cycles, in propagation conditions, with periods of many years. Of these the most pronounced is the one associated with the eleven-year sunspot cycle. The varying propagation conditions prohibit the advance assignment of the relevant frequencies by more than one month before their implementation.

Definition of terms used in table

Service: The codes for the programme services are as follows:

2000	Radio 2000
AFST	Afrikaans Stereo
ARL	Amateur Radio League
BBC	British Broadcasting Corporation
CHAF	Channel Africa
DW	Deutsche Welle
ORAN	Radio Oranje
SPORT	Sports Commentaries
VOA	Voice of America

Frequency (kHz): The frequency in kilohertz.

Transmitter output power: The maximum carrier power of the transmitter in kilowatts.

Target area: The geographical area at which the service is aimed.

Language: The language in which the transmission takes place.

Time of service: The time when the service is to be broadcast. The times listed are given as UTC (Universal Coordinated Time) as is the practice internationally.

Days when on air: The day(s) of the week when the service is to be broadcast.

2.2 TELEVISION BROADCASTING SERVICE

Description of category

This category covers the frequency assignments for the television broadcasting service as defined by the ITU. It covers the VHF and UHF bands.

The VHF band allocated to the RSA ranges from 174.0 to 254.0 MHz and is sometimes referred to as VHF Band III. It is to be noted that the allocation for the RSA and the neighbouring states Botswana, Mozambique, Malawi, Namibia, Zimbabwe, Lesotho, Swaziland and Zambia extends to a higher frequency than the normal allocation for Region 1.

The UHF band ranges from 470.0 to 862.0 MHz. The allocation agrees with UHF Band IV and UHF Band V allocated to ITU Region 1. In the RSA, the band for television broadcasting only extends as far as 854 MHz. Above this, assignments have been made to other telecommunication services.

Frequencies and associated information contained in this category are given in Appendix D. They relate to the frequency plan as defined in the ITU plan for television broadcasting in mainly the African area, contained in ITU [1989].

Frequencies assigned to TV low power stations are invariably in the UHF band. Orthogonal polarisation, relative to that of high power stations, is used, in order to increase frequency usage as a result of reduced interference levels with orthogonal polarisation.

Definition of terms in table

Station name: The internationally coordinated name of the transmitting station. The name was decided upon using the following guidelines: In cases where the site is located in or near a city, major town or suburb, the name of such city, town or suburb is used. In cases where it is not located near a city or town the name of a relevant hill, mountain or other well-known geographical feature is used.

Latitude and longitude: The nominal coordinates of the station in degrees and minutes south and east as contained in the ITU frequency plan. In those cases where a site has not yet been developed, i.e. where the frequency is assigned to a theoretical lattice point, the co-ordinates are those of the theoretical point.

Vision freq. (MHz): The frequency of the vision carrier in megahertz. (The sound-carrier frequency is not given, as it is 6 MHz above the vision carrier in all cases.)

Channel No: The number of the frequency channel of the vision carrier, according to the ITU designation.

Polarisation: The dominant polarisation mode of the transmitting antenna, which in all cases is the only mode. The dominant polarisation is either horizontal (H) or vertical (V).

ERP: The maximum effective radiated power. In the case of an omni-directional antenna it is the effective radiated power in any direction. In the case of a directional antenna it is the effective radiated power in the direction of maximum gain. The ERP is specified in either watts (W) or kilowatts (kW) and is sometimes rounded off to the nearest integer.

Offset: The frequency offset from the nominal frequency given in the assignment plan to reduce co-channel interference. The offset may be positive (P), i.e. the frequency is greater than the nominal frequency, or negative (N), i.e. the frequency is less than the nominal frequency. The letters P or N are preceded by the offset in twelfths of the line frequency (e.g. 20P means that the frequency is $20/12 \times 15.625$ kHz above the nominal frequency).

Service: The programme service carried by the transmission. The codes for the programme services are as follows:

CCV	SABC-CCV
MNET	M-Net Domestic Channel
MPLX	M-Net Community Service
NNTV	SABC-NNTV
TBN	Trinity Broadcasting Network
TV1	SABC-TV1

On-air date: The date on which the service came on the air.

Where omitted the frequency is either available for future use at the station site or available for assignment to a site in the vicinity of the theoretical lattice point that Sentech has been using. (See definition of "Status").

Status: In this column it is indicated whether the frequency has been assigned to a station that is already operational (OPER). Alternatively, it is indicated whether the frequency exists as either a spare frequency (SPAR), i.e. a frequency which may be used in the vicinity of an already developed site, or a frequency that may be used in the vicinity of a theoretical lattice node point (THEO).

3.3 TERRESTRIAL SELF-HELP STATION ASSIGNMENTS

Self-help broadcasting relay transmitting stations are transmitting stations established, owned and operated by entities such as municipalities, farmers associations, business organisations and individuals. The purpose of a self-help station is to relay a programme service to an area where the programme service cannot easily be received through the regular transmissions, i.e. where the coverage is insufficient. Self-help broadcasting relay transmitting stations are extensions of the broadcaster's network and have been operating under the broadcaster's licence. The broadcasters involved are SABC and M-Net.

Self-help relay transmitting stations are used for both sound and television broadcasting. It is envisaged that the need for self-help stations will continue, even after the introduction of Ku-band satellite transmission. The purpose of self-help stations will probably shift from providing coverage in areas where coverage from terrestrial stations is lacking to facilitating lower-cost communal reception.

3.1 SOUND BROADCASTING (VHF/FM)

Description of category

This category covers self-help stations that relay VHF/FM sound-broadcasting programme services. They operate in the regular VHF/FM band, i.e. between 87.5 and 108.0 MHz. (There are no stations that relay MF/AM or HF/AM broadcasting services.) The frequency of the regular transmission of the broadcasting service is usually translated to another frequency in the band before it is broadcasted by the self-help station.

Frequency assignments in this category are given in Appendix E.

Definition of terms used in table

Station name: The standard name of the transmitting station. The name was decided upon using the following guidelines: In cases where the site is located near a city or major town, the name of such city or town is used together with the name of a relevant institution, farm, hill, mountain or other well-known geographical feature.

Latitude and longitude: The coordinates of the station in degrees, minutes and seconds south and east.

Freq. (MHz): The frequency in megahertz.

ERP: The maximum effective radiated power. In the case of an omni-directional antenna it is the effective radiated power in any direction. In the case of a directional antenna it is the effective radiated power in the direction of maximum gain. The ERP is specified in watts (W).

Polarisation: The dominant polarisation mode of the transmitting antenna, which in the majority of cases is the only mode. The dominant polarisation is usually vertical (V).

Service: The programme service carried by the transmission. The codes for the programme services presently making use of self-help transmitting stations are as follows:

2000	Radio 2000
AFST	Afrikaans Stereo
RADS	Radio 5 (Five FM)
RGHP	Radio Good Hope

On-air date: The date on which the service came on the air. In the case of the service not yet on the air it is the planned date.

Status: In this column it is indicated whether the frequency has been assigned to a station that is already operational (OPER).

Station operator: The organisation that operates the station under an SABC or M-Net licence.

3.2 TELEVISION BROADCASTING

Description of category

Self-help stations in this category are used for both VHF and UHF television broadcasting. The relay station may operate in the UHF band if the main transmitting station operates in the VHF band and vice versa. However, the relay station only operates in the VHF band in special cases.

Frequency assignments in this category are given in Appendix F.

Definition of terms used in table

Station name: The standard name of the transmitting station. The name was decided upon using the following guidelines: In cases where the site is located near a city, or town the name of such city or town is used together with the name of a relevant institution, farm, hill, mountain or other well-known geographical feature.

Latitude and longitude: The coordinates of the station in degrees, minutes and seconds south and east.

Vision freq. (MHz): The frequency of the vision carrier in megahertz. (The sound-carrier frequency is not given, as it is 6MHz above the vision carrier in all cases.)

Channel No: The number of the frequency channel of the vision carrier, according to the ITU designation.

ERP: The maximum effective radiated power. In the case of an omni-directional antenna it is the effective radiated power in any direction. In the case of a directional antenna it is

the effective radiated power in the direction of maximum gain. The ERP is specified in watts (W).

Polarisation: The dominant polarisation mode of the transmitting antenna, which in the majority of cases is the only mode. The dominant polarisation is either horizontal (H) or vertical (V).

Offset: The frequency offset from the nominal carrier frequency to reduce co-channel interference. The offset may be positive (P), i.e. greater than the nominal frequency, or negative (N), i.e. less than the nominal frequency. The letters P or N are preceded by the offset in twelfths of the line frequency (Eg. 20P means that the frequency is $20/12 \times 15.625$ kHz above the nominal frequency). In the majority of cases, self-help relay stations, because of the low e.r.p. employed, have a less strict frequency tolerance than main and gapfiller stations. This precludes the use of offset and is indicated by NONE (no offset) in the table.

Service: The programme service carried by the transmission. The codes for the programme services are as follows:

CCV	SABC-CCV
MNET	M-Net Domestic Channel
MPLX	M-Net Community Service
NNTV	SABC-NNTV
TV1	SABC-TV1

On-air date: The date on which the service came on the air. In the case of services not yet on the air it is the planned date.

Status: In this column it is indicated whether the frequency has been assigned to a station that is already operational (OPER).

Station operator: The organisation that operates the station under the SABC or M-Net licence.

4. BROADCASTING-SATELLITE SERVICE ASSIGNMENTS

This category, the assignments of which are given in Appendix G, covers the frequency bands planned for satellite broadcasting in South Africa. It covers both the broadcasting-satellite service (BSS) as defined in ITU [1990] and that portion of the fixed-satellite service (FSS) in the band intended to be used for telecommunications, linking and direct-to-home applications. The situation in South Africa follows the pattern elsewhere in the world: Only a few domestic satellites use frequencies in the BSS band for broadcasting and most satellite broadcasting transmissions are provided by international operators, e.g. Intelsat, PanAmSat and SES/Astra, who use frequencies in the FSS band. Frequencies in the FSS band are listed by the International Frequency Registration Board of the ITU under the Administration of the international operators.

The BSS frequencies are those between 12111.08 MHz and 12417.96 MHz. It is necessary that the frequency band 12500 to 12750 MHz be reserved for broadcasting in South Africa in order to protect the public from possible interference from telecommunications systems. The three carrier frequencies marked SENTECH1, SENTECH2 and SENTECH3 will carry the content of the three television channels provided by the SABC, as well as eight subcarriers which fall within the listed bands. These subcarriers are planned to serve as carriers for the distribution of various audio programme signals. A fourth band of 10 MHz, centred on 12743 MHz, will carry a SEDAT signal with an estimated carrier frequency of 12740.5 MHz. This band may also contain several additional low-level digital carriers. The contents of the bands marked MNET1, MNET2, MNET3, MNET4 and Viacom will be determined by the relevant institutions.

5. PLANNED BANDS

5.1 BROADCASTING IN THE 1.5 GHz BAND

The ITU has allocated the frequency band 1452 to 1492 MHz to the broadcasting service and broadcasting-satellite service for digital audio broadcasting.

A competent ITU conference is to be convened, hopefully not later than 1998, for the planning of the broadcasting-satellite service in the band 1 to 3 GHz. The conference is to develop procedures for the conditional use of complementary terrestrial broadcasting and to review criteria for sharing with other services.

6. UNUSED BANDS

6.1 LOW-FREQUENCY (LF) BROADCASTING

Broadcasting in the low-frequency (LF) band, often called the long-wave (LW) band, covers the frequency range 155 kHz to 281 kHz. The use of this band originated during the experimental phase of broadcasting in Europe, many years ago. Currently only a very limited number of European countries make use of the LF band. By the time sound broadcasting was introduced in South Africa technology had already progressed beyond the LF band to the MF and HF bands. The lack of suitable available receivers precludes the use of this band for broadcasting.

6.2 TELEVISION BAND I

Television broadcasting in Band I in South Africa is, by ITU definition, restricted to the band 54 to 68 MHz. This effectively allows for only one television channel. When the implementation of television in South Africa was being planned, it was decided to forfeit the use of Band I in favour of an extended Band III (to give the additional channel 13). This was because Band I suffered from the following shortcomings: receivers which cover Band I were not readily available; designing receivers to cover Band I in addition to bands II, III and V, was complicated and costly and, lastly, receiving and transmitting antennas were large. This is still the situation today.

Band I also suffers from long-distance interference effects, propagation effects being similar to that for HF under certain conditions. This would have been a major problem to contend with had South Africa decided to make use of this band.
