**STANDARDS ACT, 2008
STANDARDS MATTERS**

In terms of the Standards Act, 2008 (Act No. 8 of 2008), the Council of the South African Bureau of Standards has acted in regard to standards in the manner set out in the Schedules to this notice.

All South African standards that were previously published by the South African Bureau of Standards with the prefix "SABS" have been redesignated as South African national standards and are now published by the SABS Standards Division (a division of SABS) with the prefix "SANS".

A list of all existing South African national standards was published by Government Notice No. 1373 of 8 November 2002.

In the list of SANS standards below, the equivalent SABS numbers, where applicable, are given below the new SANS numbers for the sake of convenience. Standards that were published with the "SABS" prefix are listed as such.

SCHEDULE 1: ISSUE OF NEW STANDARDS

The standards mentioned have been issued in terms of section 16(3) of the Act.

Standard No. and year	Title, scope and purport
SANS 556-2-1:2012	<i>Low-voltage switchgear - Part 2-1: Earth leakage circuit-breakers.</i> Covers earth leakage circuit-breakers (ELCBs), the main contacts of which are intended to be connected to circuits with rated voltages that do not exceed 1 000 V a.c. or 1 500 V d.c.
SANS 556-2-3:2012	<i>Low-voltage switchgear - Part 2-3: Modular earth leakage devices (without integral current breaking).</i> Covers modular earth leakage devices (MELDs) that do not incorporate a current-breaking device, for use in circuits with rated voltages that do not exceed 1 000 V a.c. or 1 500 V d.c.
SANS 556-2-4:2012	<i>Low-voltage switchgear - Part 2-4: Portable earth leakage devices without integral overcurrent protection for household and similar use.</i> Covers portable earth leakage devices (PELDs) for household and similar use, that do not incorporate overcurrent protection, for use in single-phase circuits for rated currents that do not exceed 16 A for voltages that do not exceed 250 V a.c. or for rated currents that do not exceed 32 A for voltages that do not exceed 130 V a.c. to earth.
SANS 1165:2012	<i>Modified poly(vinyl chloride) (PVC-M) pressure pipes and couplings for compressed air services in underground mining.</i> Specifies requirements for one pressure class (700 kPa) of modified poly(vinyl chloride) (PVC-M) pipe of nominal sizes 50 mm to 500 mm and one class of coupling for these pipes suitable for the conveyance of compressed air.
SANS 1264:2012	<i>Garbage bin liners.</i> Specifies the general characteristics, requirements and test methods for garbage bags and bin liners made from thermoplastic materials containing a minimum of 10 % of post-consumer recycle that ensures fitness for purpose.
SANS 1299:2012	<i>Tempering valves for storage hot water systems.</i> Covers the requirements for tempering valves for storage hot water systems particularly in domestic situations, where hot water poses a hazard. These valves are intended to prevent scalding in locations such as homes, schools, motels and residential premises, where ideally all hot water outlets should be sourced from a tempering valve. Applies to valves suitable for water inlet temperatures of up to 100 °C.
SANS 1536:2012/ ISO 11432:2005	<i>Building construction - Sealants - Determination of resistance to compression.</i> Specifies a method for the determination of the resistance to compression of sealants used in joints in building construction.
