**AMENDED TERMS OF REFERENCE FOR MARKET  
INQUIRY: Private Healthcare Sector  
February 2019**

## 1. BACKGROUND

The Inquiry has been in existence since 6 January 2014 and has been extended several times in previous gazettes<sup>a</sup>. In November 2018, the Inquiry completion date was extended to 29 March 2019.<sup>b</sup>

The Inquiry published its Provisional findings and Recommendations Report on 5 July 2018 and received most stakeholder comments and responses in September 2018. However, some stakeholders requested for access to underlying data and information through the data room process, in order to assess the evidence relied on by the Inquiry in coming up with its Provisional Findings and Recommendations Report. In this regard they also requested and were granted extensions to submit their responses later in November 2018. By December 2018, the HMI had received a total of 69 stakeholder responses. These have been published in the HMI website.

To date the Panel and technical team have made good progress in reading, reviewing and analysing stakeholder responses and submissions received with due diligence, although the process remains underway.

On 23 January 2019 however, the Competition Commission (the Commission) published a stakeholder notice in which it notified all stakeholders that the work of the Inquiry Panel and external consultants would be suspended due to the Commission's budgetary constraints. It was also announced that the Inquiry would resume in Quarter 1 of the 2019/20 financial year (i.e. 1 April 2019). On 4 February 2019, the Inquiry Panel published a stakeholder notice in which they committed to finishing the Inquiry and working towards finalising the Inquiry Final Findings and Recommendations Report when the Inquiry resumes. It was also communicated that the HMI technical team would, during the suspension of the Inquiry, continue in its role of supporting the Inquiry, including reviewing stakeholder submissions received.

---

<sup>a</sup> Amended Terms of Reference for Market Inquiry: Private Healthcare Sector, Government Gazette no. 40480; Government Gazette no. 41311.

<sup>b</sup>Government Gazette no.42068.

The Inquiry had planned to hold several seminars relating to funder's market concentration, facilities market concentration as well as Excessive utilisation and Supply Induced Demand in February 2019. The seminars have however, also been postponed and will be prioritised and held when the Inquiry Panel resumes its work.

## **2. AMENDMENT OF THE TERMS OF REFERENCE**

In terms of section 43B(5) of the Competition Act 1998 (as amended), the Commission may, by way of an amendment to the Terms of Reference, amend the scope of the Inquiry, or the time within which the Inquiry is expected to be completed, by further notice in the Gazette.

The scope of the Inquiry remains the same.

The recent interruption to the work of the Inquiry, as well as the requirement for further extensive stakeholder engagements in respect of key aspects of the Inquiry Provisional Findings and Recommendations Report, necessitates a further amendment to the Inquiry completion date.

Upon completion of the Inquiry outstanding work, including among others: stakeholder response reviews and submissions; assessment of evidence; further research; stakeholder engagements, and seminars, the Panel will consider the extent to which it needs to revise its Provisional Report with the view to publishing the Final Findings and Recommendations Report.

In terms of the amendment, the Inquiry Final Report and Recommendations, will be completed by **30 September 2019**.

A detailed revised administrative timetable will be made available on the Inquiry website by no later than 28 February 2019.

Notice is hereby given that Agrément South Africa has, with effect from 29 November 2017, issued an Agrément certificate, details of which appear in the schedule hereto.

**SCHEDULE**  
Agrément Certificate 2017/553

- Subject:** GHS ClipPlus Wall Technology Building System
- Certificate holder:** GHS GmbH
- Description:** GHS ClipPlus Wall Technology Building System utilises conventional concrete foundations and a surface bed at least 100 mm thick that are always the responsibility of an approved competent person.
- The superstructure walls are constructed of interlocking UV-resistant Polyvinyl-chloride (PVC) modules incorporating vertical and horizontal cavities in which reinforcement steel, as specified by the engineer, are installed and filled with concrete of 15 to 20 Mpa. The PVC modules provide permanent shuttering. The modules are 80 mm wide for both external and internal walls. There are nine different profile types for walls, each with a specific function. The basic profile is the CP80 W300, which is connected to the CP80 H100 profile in order to form a wall.
- A continuous concrete ring-beam which incorporates roof holding-down anchors is cast at door or window height to support the roof structure.
- Walls are anchored to the concrete floor slab using vertical steel reinforcing starter bars (Y10) spaced at 800 mm centres. The starter bars are 650 mm long, with 150 mm embedded into the foundation (anchorage length  $\geq 10 \times$  diameter) using chemical anchors (epoxy adhesive). Reinforcement is also placed at window and door openings, and at wall junctions. In all instances, the sizes, numbers and location of reinforcing bars must be specified by an approved competent person. Occupancy dividing walls (walls dividing two dwellings) are 160 mm thick comprising two 80 mm thick walls.
- Roofs can either be constructed from light-weight steel or timber trusses, with light- or heavyweight roof cladding. Insulated ceilings are always installed.
- Window and door frames are conventional or Agrément approved and are purposely made to suit the design of the building. Window and door frames are installed in openings on site (from 48 hours after filling the walls with concrete).
- Plumbing and electrical conduits are installed using cable pipes and junction boxes pre-installed in the wall profiles during the manufacturing process. These services must be specified and installed in accordance with good building practice.

SCHEDULE  
Agrément Certificate 2017/554

**Subject:** EVG 3D Panel Construction System

**Certificate holder:** EVG 3D Africa (Pty) Ltd

**Description:** EVG 3D Panel Construction System is a prefabricated building system which utilises factory produced sandwich panels that are assembled on site, and thereafter finished with shotcrete (20 MPa).

The building system is erected on a conventional concrete foundation (protected by a damp-proof membrane) and a 100 mm thick surface bed. The design and approval of foundations are always the responsibility of an approved competent person.

External wall panels consist of a 100 mm thick expanded polystyrene (EPS) core (15 kg/m<sup>3</sup>). Two plane-parallel welded wire mesh sheets (cover meshes), which act as a plaster key, placed on either side of the EPS core are welded to diagonal galvanised steel wires which penetrate through the EPS core. Walls are finished with 50 mm thick shotcrete on either side of the EPS core.

Internal loadbearing and non-loadbearing walls consist of a 50 mm thick EPS core (15 kg/m<sup>3</sup>). Two plane-parallel welded wire mesh sheets (cover meshes) placed on either side of the EPS core are welded to diagonal galvanised steel wires which penetrate through the EPS core. Loadbearing walls are finished with 50 mm thick shotcrete and non-loadbearing walls are finished with 40 mm thick shotcrete on either side of the EPS core.

Wall panels are produced in a standard width of 1200 mm, with lengths supplied as required; up to 6000 mm. Panels may be cut to shape and size on site. The exterior surfaces of panels are finished with a weatherproof coating and the interior surfaces are plastered and painted, or clad with conventional plasterboard systems.

A reinforced concrete ring beam is cast on top of external and loadbearing walls. External corner, internal wall and T-junctions are reinforced with L-shaped strips of welded wire mesh, fastened onto the wall panel welded wire mesh.

Roofs comprise galvanised light-weight steel trusses and purlins clad with conventional roofing tiles. Roof construction is the responsibility of an approved competent person. Alternatively, roof and floor slabs are constructed of panels consisting of a 100 mm thick EPS core. Two plane-parallel welded wire mesh sheets (cover meshes) placed on either side of the EPS core are welded to diagonal galvanised steel wires which penetrate through the EPS core. Slabs are finished with 50 mm thick shotcrete on the bottom side and 60 mm thick concrete on the top side.

Window and door frames are conventional or Agrément approved and are purposely made to suit the design of the building.

Services may be run concealed within the panels by installing them behind the welded wire mesh. If insufficient space exists between the welded wire mesh and the EPS core, the EPS may be cut or channeled (using a blow torch) to form a chase for the service.

**Certificate holder:** Everite (Pty) Ltd

**Description:** Everite Hebel Autoclaved Aerated Concrete (AAC) Block Building System is light-weight concrete masonry product. The blocks are manufactured from widely available materials including hydraulic binders (cement, lime & fly ash), fine sand, aluminium powder (expansion agent) and water.

The blocks are factory produced in sizes of 600 mm long x 250 mm high, with thicknesses of 100mm, 110mm, 150mm & 220mm, with a density range of 580 – 600 kg/m<sup>3</sup>.

The walls (Interior & Exterior) are constructed by laying the blocks in a conventional stretcher bond using thin proprietary mortar. Both external & internal walls can be plastered with a minimum of 3 mm to a maximum of 10 mm thick conventional cement plaster and this must be done as per the manufacturer's specifications.

The foundations are conventional concrete strip footings or concrete raft with thickened edge beams. They are always the responsibility of a registered professional competent engineer.

Roof structures are conventional, steel or timber trusses that must be designed by a professional registered competent engineer and erected and fixed to the wall under his supervision. The roof structure is clad with light- or heavy-weight cladding.

All services are conventional and are chased into the wall surface as one would do with conventional brick structures. The grooves are then filled using thin proprietary mortar which is then sanded down and plastered over. Services on only 100 mm thick blocks must always be surface mounted. The services must be specified and installed in accordance with good building practice.

**Subject:** Greenlite Concrete Jumbo Blocks Building System

**Certificate holder:** Greenlite Blocks Pty Ltd

**Description:** Greenlite Concrete Jumbo Blocks are light-weight masonry concrete blocks, comprising a mixture of Expanded Polystyrene (EPS) beads, cement, water and additives. The blocks have a compressive strength of at least 3 Mpa and a dry density of 550 kg/m<sup>3</sup>. The blocks are produced in moulds in a factory to the following dimensions or sizes:

- 600 mm long x 300 mm high x 100 mm wide
- 600 mm long x 300 mm high x 140 mm wide
- 600 mm long x 300 mm high x 200 mm wide.

Filler blocks are of the same material with sizes 100 mm, (160 mm & 200 mm) long x 300 mm high x 100 mm (140 mm & 200 mm) wide.

Greenlite Concrete Jumbo Blocks are pre-grooved and are supplied with keys to interlock the blocks together in position and to interlock the next row above.

The blocks are laid in conventional stretcher bond pattern whereby the first course is laid on 50% porcelain tile adhesive and conventional mortar and the rest of the courses using the tile adhesive as mortar. Once the blocks are laid, the mortar joint must always be between 5 mm to 8 mm thick. Before plastering the walls, a standard slush mixture of cement, bonding agent, sand and water must be applied on the Greenlite Jumbo Block walls, which improves plaster adhesion. Then a final layer of a 12 mm to 15 mm thick plaster must be applied on both sides of the walls.

Foundations are conventional and are always the responsibility of an approved competent person.

When using the strip foundation a mixture of 50% porcelain tile adhesive and 50% conventional mortar must also be used on the foundation wall up to the plinth level.

Roof comprises light-weight steel or timber trusses with metal sheeting or concrete tiles or any Agrément South Africa approved cladding. Y10 horizontal bars are placed across the perimeter of the walls at the last two courses to assist in roof anchorage.

All services on a 200 mm thick blocks are conventional and are chased into the wall surface as one would do with conventional brick structures. The grooves are then filled using mortar which is then sanded down and plastered over. Services on the 100 mm and the 140 mm thick blocks must always be surface mounted. The services must be specified and installed in accordance with good building practice.

Non-Wet Construction Building system is a single-storey structure that utilises a conventional raft foundation with thickened edge beams and precast reinforced concrete wall panels to engineer's specifications. The foundations are always the responsibility of a registered competent person. Roofs are designed according to a rational design as per the provision of **SANS 10400-L**

The reinforcement steel complies with the requirements of **SANS 920**

The wall panels are factory produced, and made from horizontally cast prefabricated reinforced concrete. Both internal and external wall panels have a thickness of 150 mm. The lengths and widths of the panels may vary depending on the requirements of the client, however, Non-wet construction building system panels are designed within the dimensional limitations of 4000 mm high and 10000 mm long. The wall panels are recessed at pre-determined positions to allow for mechanical interlocking of panels to the roof, foundation and adjacent panels in a building. External wall panels are finished externally with 15 mm of Pratiperl plaster and internally with a 3 to 5 mm cementitious skim plaster. Internal wall panels are plastered on either side with 3 to 5 mm thick skim coat and finished with conventional or Agrément approved paint.

Window and door openings and service connections are incorporated during the manufacturing process.

**Subject:** Polymer Modified Bitumen Stabilising Material: Soil Stabiliser

**Certificate holder:** New Age Road Solutions

**Description:** PMBSM soil stabiliser, is a poly modified bitumen emulsion. It is used for stabilising road base construction materials for non-paved gravel roads.

PMBSM is constituted through a chemical reaction by combining polymers and bitumen emulsion. Depending on the moisture content of the soil, PMBSM can be diluted with water to obtain the required optimum moisture content. The resultant mixture is added to natural gravels to form a water resistant, elastic and robust layer. The addition of PMBSM produces a Bitumen Stabilising Material design that results in increased strength and durability of the base course while repelling the ingress of water.

The mix design and application rate depend on the site-specific material and the required road design specifications.

PMBSM is applied at ambient temperature by use of calibrated recyclers or Bitumen distributors. It is applied as a form of bitumen stabilizing material and the standard design methods detailed in SANRAL's manual South African Pavement Engineering Manual (SAPEM) 2013 and South African Bitumen Association (SABITA)'s TG2 are applicable. Alternatively New Age Road Solutions' guideline documents offer application methods.

**Subject:** GB5 High Modulus Asphalt System**Certificate holder:** Much Asphalt (SA)

**Description:** GB5 High Modulus Asphalt System is a high-performance asphalt mix paved in a conventional manner. It consists of graded crushed aggregate, Styrene-Butadiene-Styrene (SBS) modified bitumen, filler and reclaimed asphalt (RA) up to 25%. It is applied as a base or surface pavement layer (with due consideration given to expected functional properties such as macro texture/skid resistance as well as fatigue properties based on total pavement structure and expected traffic loading).

The mix design, manufacturing and application of the product is to be strictly controlled. The final mix and properties of the GB5 High Modulus Asphalt System depend on the specifications of the mix designs as done by EIFFAGE Travaux Public for the plant and material to be used. All materials are sourced from South Africa and the proportions vary slightly from area to area, depending on the aggregate available in the area. Aggregates must comply with the latest requirements of Committee of Land Transport Officials, **COLTO** standard specification.

The bitumen binder 35/50 penetration grade must conform to the requirements of **SANS 4001-BT1** which is then modified with SBS and this is determined in the design process based on site-specific conditions. GB5 High Modulus Asphalt System is manufactured in a hot-mix asphalt plant, and applied by a conventional paver, over a tack coat applied at a tolerance of  $\pm 0.2 \text{ l/m}^2$ . GB5 High Modulus Asphalt System must always be manufactured at an appropriate temperature (approximately 170°C).

It can also be used in conjunction with conventional pedestals or Agrément approved.

The floor slab is 1235 mm or 1268 mm x 1033 mm x 45 mm or 55 mm thick panel consisting of concrete reinforced polypropylene textile matt. Holes or leans in the slab are performed during manufacture to accommodate the toilet pedestal, uPVC columns and a door.

The ribbed side and back wall panels are:

- large bottom side wall panel – 1268 mm x 1033 mm x 20 mm to 25 mm
- small top side wall panel – 611 mm x 1033 mm x 20 mm to 25 mm
- large top back wall panel – 1268 mm x 969 mm x 20 mm to 25 mm
- small bottom back wall panel - 622 mm x 969 mm x 20 mm to 25 mm.

These are bolted together through the pre-formed holes in the panel using Rocla proprietary G-Lock system or conventional bolting. Panel to panel connection are joined with H-strips.

Roof panels are 1235 mm or 1268 mm x 1033 mm x 45 mm or 55 mm thick panel consisting of concrete reinforced polypropylene textile matt.

The top structure is supported by 2 x 110 mm diameter hollow uPVC column projecting above roof level and connected to the side wall panel using Rocla proprietary G-Lock system.

**Certificate holder:** Environsan Sanitation Solutions (Pty) Ltd

**Description:** The Eaziflush Sanitation Systems comprises Polymer or Ceramic Pedestals and Polymer P-traps that can be used with conventional cisterns of 6- 9 litres or with low-flushing cisterns of 2 litres. Alternatively they can be used as pour-flush toilet systems using clean or grey water. The Polymer Pedestals and P-traps are made from virgin polypropylene material and the Ceramic Pedestals are made out of clay.

Both pedestals are of the same design and algorithms and preference holds sway. They have been designed to retro-fit into the Environsan VIP (Agrément Certificate 2015/475) outer pedestal frame (Annexure B). Both pedestals work in conjunction with a modified Polymer P-trap of 75 mm diameter which enables low and pour-flushing. The trap is designed to fit the 75 mm diameter pedestal outlets. The trap tapers outwards to fit into conventional 110 mm PVC drainage and soil pipes. The design of the trap restricts the water in the P-trap to 750 ml versus the 2 200 ml in conventional traps. The former facilitates full displacement of effluents with pour-flush or low flush action.

The pedestals are connected to various on-site or off-site sanitation systems, including leach pits, septic tanks and soak-aways, biogas digesters, solid free sewers, conventional sewers or other back-end systems. As with the VIP toilet systems, these pedestals can be adjusted/adapted to incorporate integrated child friendly seats when necessary.

**BILL**

**To amend the National Minimum Wage Act, 2018, so as to correct a cross-reference; and to provide for matters connected therewith.**

**BE IT ENACTED** by the Parliament of the Republic of South Africa, as follows:—

**Amendment of section 17 of Act 9 of 2018**

1. Section 17 of the National Minimum Wage Act, 2018 is hereby amended by the substitution for subsection (4) of the following subsection:

“(4) Section **[4(6)]** 4(8) takes retrospective effect from 1 May 2017.”.

**Short title**

2. This Act is called the National Minimum Wage Amendment Act, 2019.

## **MEMORANDUM ON THE OBJECTS OF THE NATIONAL MINIMUM WAGE AMENDMENT BILL, 2019**

### **1. INTRODUCTION**

The National Minimum Wage Act, 2018 (Act No. 9 of 2018) (“the Act”) was assented to the President on 23 November 2018. Soon after the Act became operational, it was brought to the attention of the Portfolio Committee that section 17(4) of the Act contained an error, which resulted from the failure to effect a consequential amendment when the Act was considered by Parliament. The error has the effect of rendering section 17(4), read with section 4(6) absurd and it must be corrected.

### **2. OBJECTS OF THE BILL**

The purpose of the Bill is to correct a technical error by correcting an incorrect cross-reference contained in section 17(4) of the Act.

### **3. CONTENTS OF THE BILL**

- 3.1. Clause 1 of the Bill proposed a correction to the incorrect cross-reference contained in section 17(4) of the Act.
- 3.2. Clause 2 of the Bill provides the short title of the Bill.

### **4. FINANCIAL IMPLICATIONS FOR THE STATE**

None

### **5. DEPARTMENTS, BODIES OR PERSONS CONSULTED**

The Committee consulted the Department of Labour and Nedlac.

### **6. PARLIAMENTARY PROCEDURE**

- 6.1 The Committee proposes that the Bill must be dealt with in accordance with the procedure established by section 75 of the Constitution since it contains no provisions to which the procedures set out in section 74 or 76 of the Constitution apply.

- 6.2 The Committee is of the opinion that it is not necessary to refer this Bill to the National House of Traditional Leaders in terms of section 18(1)(a) of the Traditional Leadership and Governance Framework Act, 2003 (Act No. 41 of 2003), since it does not contain provisions pertaining to customary law or customs of traditional communities.

**LIST 01/2019**

The International Trade Administration Commission (herein after referred to as ITAC or the Commission) has received the following applications concerning the Customs Tariff. Any objection to or comments on these representations should be submitted to the Chief Commissioner, ITAC, Private Bag X753, Pretoria, 0001. Attention is drawn to the fact that the rate of duty mentioned in these applications is that requested by the applicant and that the Commission may, depending on its findings, recommend a lower or higher rate of duty.

**CONFIDENTIAL INFORMATION**

*The submission of confidential information to the Commission in connection with customs tariff applications is governed by section 3 of the Tariff Investigations Regulations, which regulations can be found on ITAC's website at <http://www.itac.org.za/documents/R.397.pdf>.*

*These regulations require that if any information is considered to be confidential, then a non-confidential version of the information must be submitted, simultaneously with the confidential version. In submitting a non-confidential version the regulations are strictly applicable and require parties to indicate:*

- Each instance where confidential information has been omitted and the reasons for confidentiality;*
- A summary of the confidential information which permits other interested parties a reasonable understanding of the substance of the confidential information; and*
- In exceptional cases, where information is not susceptible to summary, reasons must be submitted to this effect.*

*This rule applies to all parties and to all correspondence with and submissions to the Commission, which unless clearly indicated to be confidential, will be made available to other interested parties.*

*The Commission will disregard any information indicated to be confidential that is not accompanied by a proper non-confidential summary or the aforementioned reasons.*

*If a party considers that any document of another party, on which that party is submitting representations, does not comply with the above rules and that such deficiency affects that party's ability to make meaningful representations, the details of the deficiency and the reasons why that party's rights are so affected must be submitted to the commission in writing forthwith (and at the latest 14 days prior to the date on which that party's submission is due).*

*Failure to do so timeously will seriously hamper the proper administration of the investigation, and such party will not be able to subsequently claim an inability to make meaningful representations on the basis of the failure of such other party to meet the requirements.*

**REASONS FOR THE APPLICATION:**

- M-TEC is the sole manufacturer of optical ground wire in the SACU region and the company is facing going-concern issues arising from six consecutive years of losses in the fibre optics division;
- The company has lost contracts due to price disadvantages vis-a-vis optical fibre cables imported from the European Union (EU) which do not attract any ordinary customs duty;
- Furthermore, the company's competitive position is negatively affected by the customs duty of 10%-15% incurred on input materials used to manufacture optical fibre cables and optical ground wire; and
- Should the application for the creation of a rebate provision not be successful, M-TEC will have no other option but to discontinue operations in the fibre optics division.
